Marine Project Management Ltd

THE COMPANY

Based in Hong Kong, with a branch office in Geneva (Switzerland) and commercial offices in Athens (Greece) and Beijing (China), SeaQuest Marine Project Management Ltd is serving the shipping industry on a worldwide basis.

We provide quality Consulting Services to Ship Owners and Operators for their shipbuilding and conversion projects.

The founders of the Company have formed a permanent team that has widespread expertise in project management, particularly in the Far East.

Our key personnel are qualified Naval Architects and Engineers who possess extensive work experience within the shipping world.

Our well established procedures covering all key processes are regularly reviewed for effectiveness and for facilitating continual improvement.

The quality management system is ISO 9001:2008 certified by ABS for plan approval and construction supervision.

OUR GOALS

SeaQuest Marine Project Management Ltd will ensure that the ships are delivered in a superior condition enabling them to operate effectively and efficiently with minimal operational downtime. We believe that by implementing our rigorous quality and safety policies ships can be built to a very high standard anywhere in the world.

Our resolute approach to project management is outlined by IMO MSC 77/2/6. This document refers to an INTERTANKO paper with annex "Items Relating to New Building Activity which needs Changes" which gives stark warnings to Owners to seriously consider improving the level of new building supervision.

It is our policy to offer quality services to our Clients and to achieve, through exacting management and professionalism, a strong relationship with the Client through to the successful conclusion of the venture.

OUR EXPERIENCE

We are familiar with various types of vessel and were responsible for plan approval and construction supervision of a substantial number of vessels, including MR chemical/product carriers, LR1 and LR2 product carriers, Aframax and Suezmax oil tankers, VLCCs, Handy size to Capesize bulk carriers, container carriers, RO-RO cargo carriers, PCTCs, VLGCs, livestock carriers, Floating Storage Offloading (FSO) vessels, OSV Floating Accommodation, AHTS, Military Afloat Reach and Sustainability (MARS) tankers and Naval Logistics Support vessels.

Our office and onsite staff are fully conversant with Korean, Japanese, Chinese and Vietnamese shipyard operations.

Since inception we have been awarded new building services of more than 280 vessels from clients in more than 20 countries worldwide, employing at one time more than 130 qualified inspectors of various nationalities.

OUR SERVICES

We provide a wide range of services at competitive prices. From assigning an individual specialist, to developing and managing complex shipbuilding and conversion projects, the Company offers a unique engineering and commercial package tailored to suit each individual project and customer.

Depending on the requirements of each customer, we can offer supervision teams comprised of expatriates or a team whose main body consists of local engineers, overseen by an expatriate Site Manager.

Where necessary we provide refined procedures which have been developed through years of building and operational experience. These methods are more stringent than the procedures usually implemented by shipyards, enabling to achieve higher standards of quality.

OUR SUPPORT

Our Project Managers are stationed locally for the duration of the contract. This allows us to manage the project in the sure knowledge that full support is available for a quick and dedicated response to the project's needs, providing a single line of responsibility.

The Project Manager is responsible for overseeing the project's development and progress, managing the supervision team and ensuring that the work in progress is reported regularly to our offices and the Client.

At project completion we take care of the documentation for registration, oversee the issuance of the ship's statutory certification and organize any shipboard inspections required before departure.

Our Project Manager co-ordinates the crew arrival onboard along with the initial storing for sea. SeaQuest Marine Project Management Ltd may assist the Client in implementing a complete planned maintenance system.

OUR PERSONNEL

The Company was formed as a unique concept to create stability within projects by bringing together Naval Architects and Engineers who are highly experienced in different areas of engineering and familiar with all operational aspects of ships.

This consolidation of knowledge allows us to set a high standard within the industry and the uninterrupted flow of projects enables continuity of employment of our core personnel easing the implementation of the quality system.

Senior employees are known personally to at least one the executives; we can therefore vouch unreservedly for the professional competence and personal character of the employees. The Company maintains strict employment criteria and rigorously enforces these standards.
